

# THE COLOUR OF REGENERATIVE SCIENCE

Typical healing progression of an ulcer treated with EmoLED in combination with standard therapy, with a treatment of 60 seconds once a week.

1/2 weeks

- Increasing wound edge
- More vital periwound skin
- Decreasing inflammation
- Decreasing hyperemia
- Significant reduction of pain

3/4 weeks

- Improving wound bed
- Increasing angiogenesis
- Increasing granulation tissue

5/6+ weeks

- Reduction of skin lesion
- Increasing periwound skin tropism
